

1. Make sure a MySQL server is running on port 3306 (username: root, password: root)
2. Create a MySQL database named noisyIoT, following command works through cmd: CREATE DATABASE noisyIoT;
3. Change the first line of application.properties in "team-ethernet.web\src\main\resources" to spring.jpa.hibernate.ddl-auto=create
4. Run the program (make sure you are in the team-ethernet.web folder)

Windows

```
$mvnw spring-boot:run
```

MAC

```
$brew install maven  
$mvn spring-boot:run
```

Linux

```
$sudo apt-get install maven  
$mvn spring-boot:run
```

5. The program is now running on localhost:8080
6. After the first run change back the first line of application.properties to spring.jpa.hibernate.ddl-auto=none
